Adult Neurology

by Jody Corey-Bloom, UCSD School of Medicine,
San Diego, CA
Blackwell's Neurology and Psychiatry Access Series,
Second Edition.
<http://www.blackwellmedicine.com>

The book is organized into three main sections:

Section 1 of this book offers an organized discussion of the adult neurological evaluation including the history and examination, electrophysiological studies and neuroradiology.

Section II covers common clinical problems in neurology and ways of evaluating, managing, and treating them.

Section III illustrates the spectrum of specific neurologic diseases and disorders

Child and Adolescent Neurology

by Ronald David, St Mary's Hospital, Richmond, VA
Blackwell's Neurology and Psychiatry Access Series,
Second Edition.

The book is divided into three sections:

Section I emphasizes neurodiagnosis. It includes comprehensive history and age specific examinations which can be reproduced and tailored to individual uses. Useful introductory chapters are included in the fields of neurophysiology (electrodiagnosis) and state-of-the-art neuroimaging.

Section II uses a conventional approach to the understanding of diseases/disorders in child neurology. New in this section is a chapter entitled "Order and Disorders of Central Nervous System Development" which uses a unique teleologic approach. This includes the latest in our understanding of neurogenetic and neuroembryologic mechanisms in developmental neuropathology.

Section III visits the most commonly seen conditions in child neurology. A new chapter on AD/HD has been added.

ISBN: 1405117672
Published: September 2005
Pages: 664
Price: USD 125.00/£79.50/AUS\$ 306
